

How do I run updates on my Otech system?

It is important to make sure that your system stays up to date. As new ways to improve the stability and security of the Xubuntu system and software are developed, updates are released to the Update Manager. The Update Manager is located in the System folder in the Applications Menu.

1. Click on the **Start** button in the lower left corner of the screen.
2. Move your mouse pointer over **System**, then click **Update Manager**.
3. Check for and then install **New Updates** using the **Update Manager**.

****Please note:** After updating, Update Manager may indicate that a restart is needed for updates to take effect. In this case, you should **save all work** and **restart** your computer.
