

I am being prompted to update Xubuntu on my Otech system. Should I upgrade the Operating System?

Please be aware that Otech Support will not be able to assist you with upgraded operating systems.

You may be prompted to upgrade Xubuntu from the 11.10 version that your Otech computer has installed to 12.04, as well as newer versions as they are distributed (generally twice per year). Upgrade the operating system **at your own risk**. Loss of data, programs and settings are all likely if you choose to run the 12.04 or other future upgrades. If you are not comfortable backing up and restoring your programs and data, you may not want to run this update. Otech Support is not responsible for any lost data (from updating or otherwise), and cannot support computers with upgraded operating systems
